RAL: Having gained worldwide acceptance over the last few decades, the RAL is the most popular Central European Color Standard used today.

Specifying RAL Colors: In order to eliminate possible errors in specifying our products, we recommend the use of our product numbers (example: 09/40110 = RAL 5012 Rough Texture Matte), which not only describe the Series/Chemistry, but also the exact finish selected.

The appropriate product number associated with the RAL number and finish of choice can be found in our Standard Product Catalog.

Please contact your local Tiger Drylac warehouse location for a catalog or for assistance with specifications and suitability issues.

The RAL colors in this chart have been matched as closely as possible. Color chart production methods and influence from heat and light may account for slight color deviation from the actual RAL Standard. This chart therefore can not serve as a standard for RAL color production and is to be used as a guide for color planning and specification only.

To aid in final product selection please contact your regional Tiger Drylac location for a powder coated Q-Panel of the product of your choice.

TIGER DRYLAC®
